

Drive Workforce Readiness with Immersive Data Center Training

Training Built to Solve Your Biggest Workforce Challenges

Interplay offers a scalable technical training solution built for mission-critical environments. With Interplay, data center teams can move beyond checkbox training and into measurable workforce readiness.

With immersive 3D simulations, expert-led video courses, assessments, and role-based learning pathways, your technicians can build practical troubleshooting and operational skills before they encounter issues in the field.

With Interplay, you get training that helps:

- **Reduce Operational Risk:** Surface hidden skill gaps before they compound into costly incidents or unplanned downtime.
- **Accelerate Onboarding and Ramp Time:** Move new hires from baseline to floor-ready faster with structured, role-based learning pathways.
- **Reduce Escalation Dependency:** Build the internal capability your team needs to diagnose and resolve issues before calling vendors.

Protect Your Uptime with Technical Training

Interplay helps you develop technicians who can diagnose, decide, and act confidently under pressure. Our solution ensures your workforce is prepared for real-world failure scenarios before they happen.

With Interplay, you can:

- **Support Technician Progression:** Provide clear skill progression for technicians at every stage, from entry-level to senior, so your team grows with your operation.
- **Offer Targeted Remediation:** Use assessments to identify gaps and assign targeted training based on individual technician performance.
- **Prepare for Incident Response:** Train for high-pressure, real-world failure scenarios in a safe environment so your team responds with confidence when it matters most.
- **Cross-Train Your Team:** Ensure technicians understand how systems interact under failure, not just how individual components operate.

What Interplay Learning Customers Are Saying

89%

trained their technicians faster than ever before

92%

either grew their business or eliminated costs

85%

improved troubleshooting performance using sims

Technical Training Built for Data Center Operations

From critical power and cooling systems to infrastructure controls and safety procedures, Interplay helps technicians build the technical skills needed to operate and maintain mission-critical environments.

Power Systems

- Emergency Power Intro
- Single-Line Diagrams
- Electrical Drawings
- Power Distribution
- Commercial Transformers and More!

Cooling Systems

- CRAC/CRAH Intro
- Chiller Systems
- VFD Troubleshooting
- Pumps Introduction
- Air Handling Units and More!

Infrastructure and Controls

- Intro to Data Centers
- Critical Infrastructure
- Automation Systems
- Digital Controls
- PLC Maintenance and More!

Safety

- Data Center Safety
- Electrical Safety
- Ladder Safety
- PPE
- Electrical Code and More!
